Click on **Change connection settings**

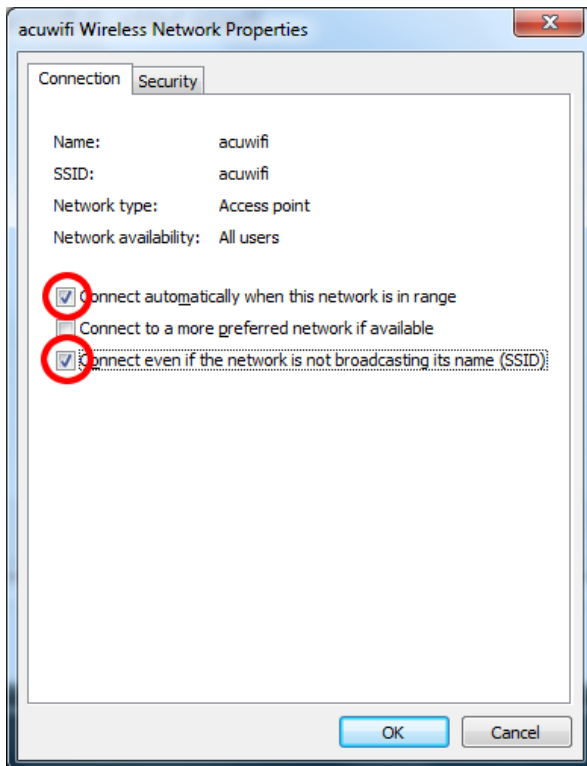

Manually connect to a wireless network

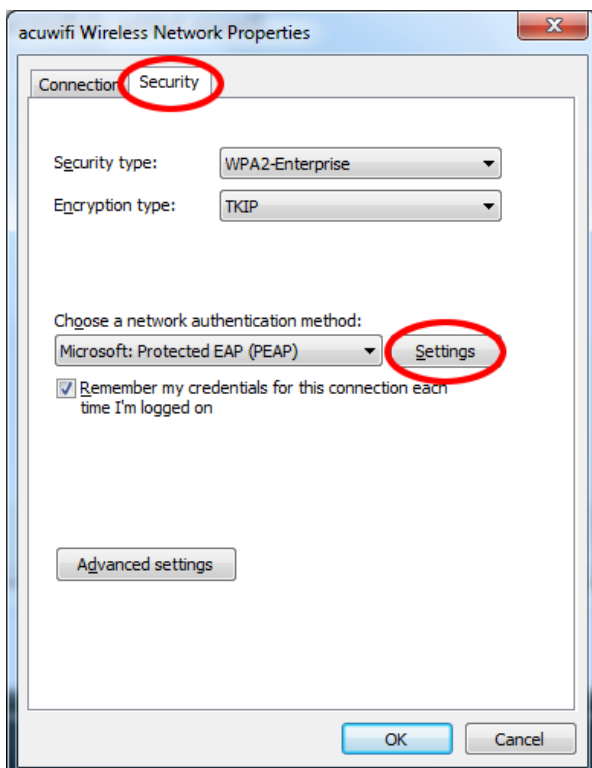

Successfully added acuwifi

[Change connection settings](#)
Open the connection properties so that I can change the settings.

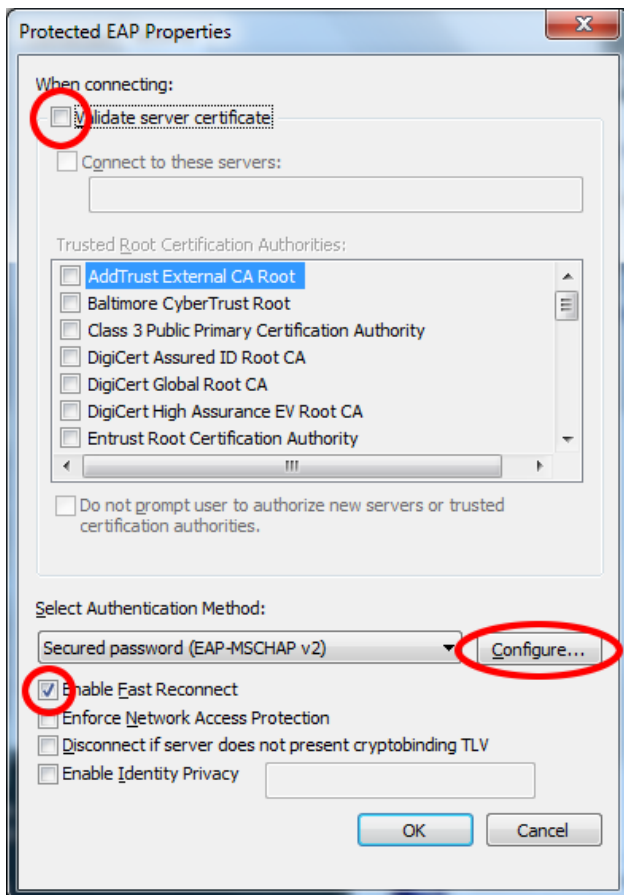

Click on and check the boxes **Connect automatically when this network is in range** and **Connect even if the network is not broadcasting its name (SSID)**

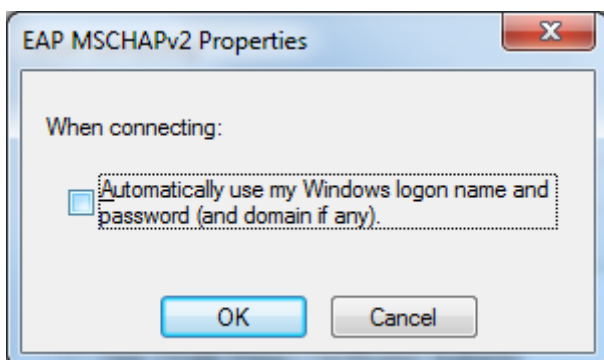

Click on the **Security** tab and then click on the **Settings** button

Click on and un-check **Validate server certificate**.
Click on and check **Enable Fast Reconnect**.
Click on the **Configure** button.

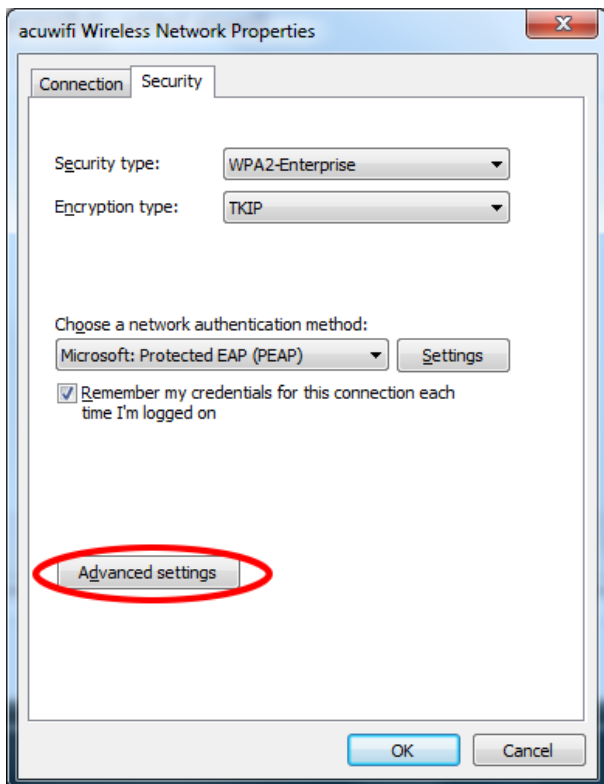

Click and un-check **Automatically use my Windows logon name and password (and domain if any)** and then click on the **OK** button.

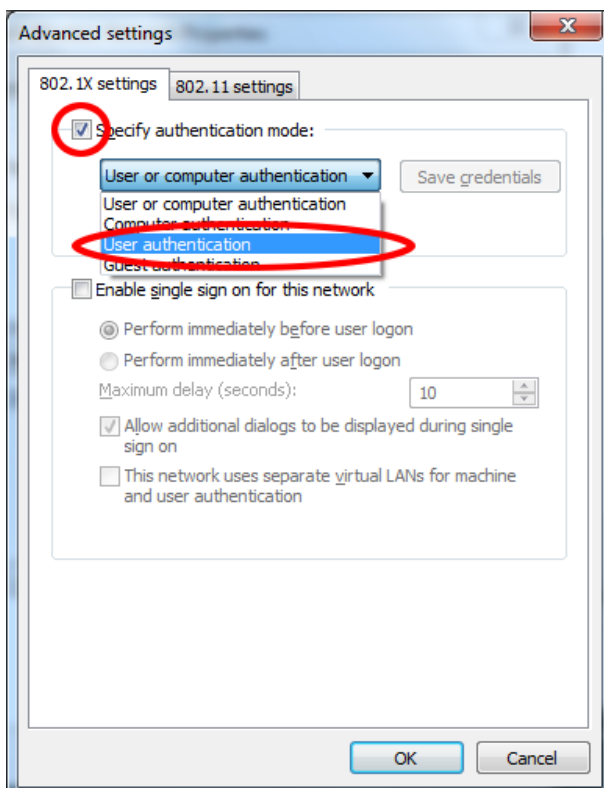

Click on the **OK** button to close the **Protected EAP Properties** window.

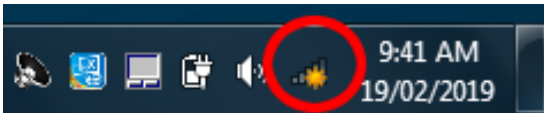

Click on the **Advanced settings** button

Click on and check **Specify authentication mode**. Click on **User authentication** in the drop-down menu and click **OK**

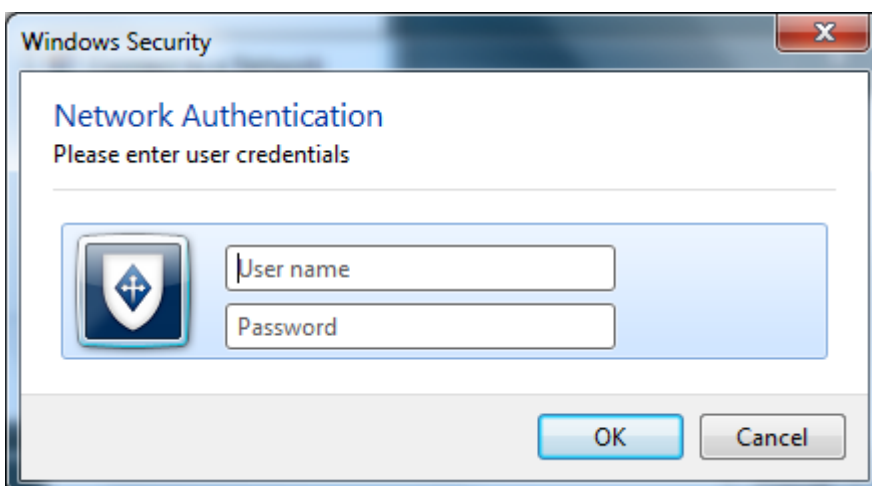

Click on the **wireless network** icon in the windows status bar again

In the **Wireless Network Connection** area click on **acuwifi** and then click the **Connect** button

Enter your ACU **username** and **password**. Click on the **OK** button to connect.

When successfully connected to **acuwifi**, the **Wireless Network Connection** area will look like this:
